Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

Reset answer

```
#include <stdio.h>
int main()
{
    int c=0;
int n;
c++;
scanf("%d",&n);
    for(int i=n/2;i<n;i++){
    c++;
        for(int j=1;j<n;j=2*j){
        c++;
            for(int k=1;k<n;k=k*2){
            c++;
                c++;
            }
            c++;
          }
          c++;
       }
       c++;
printf("%d",c);
}
```

	Input	Expected	Got
